

# How to match the electricity meter with photovoltaic panels

## Overview

---

In this video I go through four scenarios of how to read a smart meter on a home in California that is outfitted with photovoltaic solar panels and a smart meter. The meter is operated by Southern California Edison and its brand is "OpenWay".

## How to match the electricity meter with photovoltaic panels

### How to Read an Electric Meter With Solar Panels

Stop guessing your solar bill. Learn the exact steps to read your electric meter's import and export data.

### [Why Your Bill Doesn't Match Your Solar App? Power NW](#)

Confused by your solar bill vs. your app? We explain solar net metering, energy credits, the March true-up, and why you still draw power from

### Solar Power and Net Metering

Measuring the flow of electricity in two directions requires a "net meter." Your meter has two registers, both going forward but one at a time. One register is

### [RegEx match open tags except XHTML self-contained tags](#)

The tag to match may end with a simple ">" symbol, or a possible XHTML closure, which makes use of the slash before it: (/>,>). The slash is, of course, escaped since it coincides with the regular

### [Regular expression to match string starting with a specific word](#)

How do I create a regular expression to match a

### Python: match/case by type of value

You can match directly against the type of `v`, but you need a value pattern to refer to the types to match, as a "dotless" name is a capture pattern that matches any value.

word at the beginning of a string? We are looking to match stop at the beginning of a string and anything can follow it. For example, the

### [SQL Error: ORA-01861: literal does not match format string 01861](#)

ORA-01861: literal does not match format string This happens because you have tried to enter a literal with a format string, but the length of the format string was not the same length as the literal. You can

### [How to match "any character" in regular expression?](#)

You may also sometimes need to match newlines in Java regexes in contexts where you cannot pass `Pattern.DOTALL`, such as when doing a multi-line regex search in Eclipse, or as a user

### [Regular expression to match a line that doesn't contain a word](#)

I know it's possible to match a word and then reverse the matches using other tools (e.g. `grep -v`). However, is it possible to match lines that do not contain a specific word, e.g. `hede`, using a

### regexp

This MATLAB function returns the starting index of each substring of str that matches the character patterns specified by the regular expression.

### [Match case statement with multiple 'or' conditions in each case](#)

Match case statement with multiple 'or' conditions in each case Asked 3 years, 4 months ago Modified 1 month ago Viewed 39k times

### [Regular expression to match characters at beginning of line only](#)

Regex symbol to match at beginning of a line: ^  
Add the string you're searching for (CTR) to the regex like this: ^CTR Example: regex That should be enough! However, if you need to get the

### **Match everything except for specified strings**

I know that the following regex will match "red", "green", or "blue". red,green,blue Is there a straightforward way of making it match everything except several specified strings?
