[\(PDF\) A Comprehensive Review of the State-of-the-Art of Secondary](#)

This article presents a comprehensive review of robust control methods for microgrids, including AC, DC, and hybrid microgrids, with different topologies and different types of

[Secondary Control Strategies for DC Islanded Microgrids Operation](#)

In Section III, which is the core of this paper, the three secondary control strategies are introduced. Numerical simulations and comparisons among the architectures are performed in Section IV.

[Distributed secondary control for DC microgrids using two-stage multi](#)

To address this issue, in this paper, we propose a two-stage reinforcement learning secondary control method for DC microgrids, which can effectively suppress the bus voltage

[A Data-Driven Centralized Secondary Control Design Methodology for](#)

Managing frequency, voltage, and power dynamics in microgrids under varying conditions, however, poses significant challenges. This paper proposes an adaptive, data-driven secondary control

Secondary Control Strategies in the DC

Microgrids

It consists of three layers of control: primary control, secondary control, and tertiary control. At the primary level, to improve current sharing performance, droop control is usually applied. Secondary

[A Comprehensive Review of the State-of-the-Art of Secondary Control](#)

Specifically, it focuses on the secondary controller approaches (centralized, distributed, and decentralized control) and examines their primary strengths and weaknesses. The techniques

[Design and Implementation of an Energy Management System with](#)

In this study, the principal focus was on the implementation and assessment of an advanced event-triggered distributed secondary control system integrated with an energy

[Microgrid Secondary Control Design Based on Second-Order Sliding](#)

In this paper, an improved distributed secondary control scheme for DC microgrids based on a sliding mode controller is proposed to address the shortcomings of

[A Plug and Play Distributed Secondary Controller for Microgrids](#)

Abstract-A distributed controller for secondary control problems in microgrids with grid-forming (GFM) inverter-based resources (IBRs) is developed.
