[Difference between 'new operator' and 'operator new'?](#)

A new expression is the whole phrase that begins with new. So what do you call just the "new" part of it? If it's wrong to call that the new operator, then we should not call "sizeof" the sizeof

[New molecular tech revolutionizes solar heat storage](#)

A new, molecular-scale breakthrough could unlock a new path to long-term solar energy storage for heating homes and providing hot water - without a conventional battery in the equation.

When to use "new" and when not to, in C++?

You should use new when you wish an object to remain in existence until you delete it. If you do not use new then the object will be destroyed when it goes out of scope.
