

Silicon crystal panel photovoltaic power generation

Overview

Crystalline silicon or (c-Si) is the forms of , either (poly-Si, consisting of small crystals), or (mono-Si, a). Crystalline silicon is the dominant used in technology for the production of. These cells are assembled into as part of a to generate from sunlight.

Crystalline silicon

Summary
Overview
Properties
Cell technologies
Mono-silicon
Polycrystalline silicon
Not classified as Crystalline silicon
Transformation of amorphous into crystalline silicon

Crystalline silicon or (c-Si) is the crystalline forms of silicon, either polycrystalline silicon (poly-Si, consisting of small crystals), or monocrystalline silicon (mono-Si, a continuous crystal). Crystalline silicon is the dominant semiconducting material used in photovoltaic technology for the production of solar cells. These cells are assembled into solar panels as part of a photovoltaic system to generate solar power from sunlight.
