

Solar power generation array at the moon base

Overview

5-degree axial tilt creates near-perpetual sunlight at south pole peaks, enabling solar-powered lunar bases without massive battery storage. NASA's Artemis missions target these illuminated crater rims where solar panels could run 80-94% of the time.

[Solar Power Generation Profile Estimation for Lunar Surface](#)

Solar photovoltaic (PV) systems are among the most suitable power generators for lunar applications given the abundant solar irradiance the lunar surface receives as a result of the lack of an atmosphere.
