

The photovoltaic bracket does not meet the load-bearing capacity

Overview

The key is to ensure load paths are continuous from the PV system down to the foundation. Before making any modifications, always check local building codes.

The photovoltaic bracket does not meet the load-bearing capacity

Photovoltaics (PV)

Photovoltaic systems work by utilizing solar cells to convert sunlight into electricity. These solar cells are made up of semiconductor materials, such as silicon, that absorb photons from

[IR 16-8: Solar Photovoltaic and Thermal Systems Review and](#)

Ballasted solar PV arrays are systems that rely on weight and friction to resist wind and seismic forces and typically have no (or very few) mechanical attachments to the roof structure.

[How Do Solar Cells Work? Photovoltaic Cells Explained](#)

The conversion of sunlight, made up of particles called photons, into electrical energy by a solar cell is called the "photovoltaic effect" - hence why we refer to solar cells as "photovoltaic", or PV

Photovoltaics and electricity

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed
