

# What is the Iron-Nickel Battery Energy Storage Project

## Overview

---

When nickel-iron and lead batteries are fully charged they start to produce hydrogen. Which was seen as a disadvantage. But now nickel-iron batteries are being investigated for use as combined batteries and for production for cars and storage. Those "battolysers" could be charged and discharged like conventional batteries, and would produce hydrogen when fully charged. 'Battolyser' is a registered trademark of the Dutch spin off of the University of Delft Battolyser Systems. In 2023 Ba.
