

# What is the crossbeam on the photovoltaic bracket

## Overview

---

Crossbeam brackets generally serve a compressive role, typically made of aluminum alloy C-shaped steel, with hole diameters selected based on the installation environment. Vertical brackets can either be the back beam of the triangular beam frame or be designed separately.

### CN203968038U

Based on the problems referred to above, the utility model provides a kind of solar bracket crossbeam joint, to realize quick and dismantlable assembling of solar bracket.

The support structures are the elements that allow the fixing of the modules on the roofs where the photovoltaic installation must be housed, constituting a main element of the solution.

### Pole Mounted Solar PV Mounting System

Horizontal Crossbeam: A welded or bolted steel beam assembly mounted at the pole top, spanning the full width of the module array. The beam transfers module dead load and wind overturning moment

Add second set of base panels by hanging the monarch clips on the panel to the brackets on the stretcher bars of the frame. The brackets are able to adjust to help align the surfaces of the base

Protea Bracket is designed for mounting solar PV components for attachment to face-fastened trapezoidal rib metal roof panels.
